

RMS Monitoring System

www.lande.com.tr
sales@lande.com.tr

FEATURES

- IP based location detection
- Internal temperature and humidity sensor
- External temperature Sensor
- Photo taking in unauthorized and sabotage situations with Photo-Camera feature
- Texting SMS to people defined in case of an Alarm
- The ability to record open and closed status of cabinet doors to the system by alarming and recording
- Setting a maximum and minimum internal cabinet temperature limit.
- Temperature display parameter sensitivity at 0,1 °C interval
- Retrospective reporting
- Setting the desired parameters via Internet.
- Updating the software via Internet.

PRODUCT FEATURES

| | |
|---|--|
| Door detection | Open-Closed Magnetic sensor |
| Camera | Photo capturing and sending with time settings |
| Water Level Detection | External Flood Sensor |
| Temperature and Humidity Detection Sensor | With DHT11 digital temperature and humidity sensor |
| External Temperature Sensor | NTC analog temperature sensor |
| System operating temperature | 20°C ~ 80 °C, 85% R.H. |
| Sensor operating temperature | -0°C ~ 60 °C, 85% R.H. |
| Humidity Sensor operating temperature | -0°C ~ 60 °C, 85% R.H. |
| Measurement Value | °C |
| Sensitivity | %±0,1 Standard |
| Value Measurement Interval | 750 Ms (Adjustable) |
| Identify GSM No | Yes |
| Data Communication | Standard TCP/IP Protocol |
| Limit Settings | Upper and Lower limits can be identified |
| Output Current | 5 volt DC 300 mA |
| Dimension | 105 (W) x 74(D) x 27 (H) mm |

Cabinet Monitoring and Management System

All data received via the remote monitoring and management system can be monitored and managed locally or over the web via the LANDE RMS Tracking screen. Via "LANDE RMS Tracking", data is sent to WEB servers through internet connection or local network desktop application (LANDE RMS VIEWER). The archived data in the WEB server database or the desktop application is monitored instantly and required reports are taken.

Timely intervention of the users is ensured with an automatic warning that is given via system in case of environment temperature and humidity out of limits, door intervention by unauthorized persons, floods on the ground, alarms via the system in the event of undesirable situations, and timely intervention of the users.

You will be able to manage the process according to the received data through our web-based software or desktop application with the scenarios specific to your company. It can be integrated into your software interface through the API (Application Programming Interface) we released. The data is sent to the desired terminal graphically and easily understandable in a computer environment with LANDE RMS VIEWER.

In the case of alarms; when the max. and min. limit temperature values are exceeded, when the internal temperature is below the set value, when the device door is opened, the camera sends the information via e-mail and sms to the defined persons..

Our device is covered by a 2-year warranty against production and workmanship defects and is guaranteed a spare parts supply for 10 years.
